JAMPRO “Bats a Thousand” With their latest Batwing Installation

Sacramento, Calif.-August 25, 2003--**JAMPRO ANTENNAS, INC.** announces the completion of another turnkey DTV installation for KTNV. The JAT-12 Batwing was designed to operate on both the DTV channel 12 and the analog channel 13.

The JAT-12 antenna model was requisitioned by KTNV, a station owned by Journal Broadcast Group, a pioneer in the broadcast industry. Jampro has delivered a number of systems for them recently, including channel 46 in Palms Springs and 28 in Milwaukee. The new Batwing antenna serves KTNV’s rapidly growing and changing market of Las Vegas, NV. The Batwing performance has been excellent, allowing for broad penetrating coverage of their target market.

JAMPRO was the preferred manufacturer for this venture because of its extensive history and experience in Batwing antennas. They are the oldest manufacturer of Batwings, and are one of the only companies still producing them. They are also producing reharness kits for both Jampro models and other manufacturer’s Batwing antennas.

JAMPRO is committed to providing customers with high quality equipment and extending solutions into the broadcast marketplace. More information on JAMPRO can be obtained at www.jampro.com.
